Evotec is proud to announce the successful completion of a major Certified Cat 6 Cabling and Electrical installation for a Worldwide Logistics Distribution Centre.

We successfully installed over 1 km of Optic Fibre Cable and 35 kms of Cat 6 Copper Cable.

The project comprised data connectivity throughout the distribution centre for three offices in the main warehouse and a 2-storey administration building adjacent.

Team Evotec installed 160 data outlets for the conveyor belt system, 128 CCTV cameras, 25 wireless access points, 100 data outlets, all networked to data centres.

The Cat 6 cabling is fully certified by TE Connectivity with a full 25-year warranty as Evotec are a certified TE Enterprise Installer.

Following this successful installation, Evotec has been selected to complete the next two distribution centres in Melbourne and Brisbane.

Evotec General Manager, Peter Carr, said he was proud of the Evotec Infrastructure Division.

“Our team worked long hours to exacting standards to achieve this on time and on budget with zero OH&S issues,” Peter said.

“A project of this size presents challenges for any organisation – but our investment in enterprise-grade systems and training paid off and all parties can be proud of the way they worked together.”
