

Evotec's Electrical and Data Cabling division is responsible for the design, installation and management of structured cabling solutions and electrical infrastructure and services. We specialise in:

- The design of advanced solutions
- The supply of leading brands
- Installation by our own qualified engineers
- Certification to manufacturers' standards
- Maintenance to ensure optimum ongoing performance.

Our Electrical and Data Cabling Infrastructure portfolio is diverse, providing a consolidated range of capabilities, in a single organisation.

### **Analysis and design**

The correct design of an organisation's infrastructure is essential to its ongoing, reliable contribution to the organisation. It is imperative for employee safety that all infrastructure components meet Australian Standards, and provide employees with a productive and safe environment in which to work.

Evotec's Infrastructure Division is committed to providing our customers with expert analysis and design for all structured cabling and electrical implementations.

We perform infrastructure audits, where we examine existing communications and electrical environments. We consider their age, components and performance, and assess their capability relative to current and future requirements.

We utilise this knowledge to design a solution which will satisfy human resource requirements and suit your physical environment.

### **Testing services & health check services**

Evotec offers a range of testing services to ensure you continue to offer your staff a secure and efficient local area network as well as a safe electrical environment.

### **Manufacturers' certification**

We provide assurance that your cabling solution will meet manufacturers' requirements for warranty.

### **Emergency and exit lighting certification**

Evotec offers regular inspection and testing of all Emergency and Exit lighting to ensure your company complies with all Local Government requirements including Form 15 Certification.

### **Appliance testing and tagging**

Evotec can test and tag all your existing electrical appliances in order to ensure your organisation complies with Part 2, Section 8(1)(b) of the NSW Occupational Health and Safety Act.
