

What does Sophos Heartbeat do?

{youtube}Afm_2cvKni4|660|370|1{/youtube}

Finds the threat faster – threat indicators like suspicious network traffic are instantly shared between the Next-Gen Firewall and the Next-Gen Endpoint to detect and prevent attacks.

- Simplifies investigation – active identification of compromised systems shares computer names, users and paths between Endpoint and Firewall, so you can take action quickly.
- Minimise impact – compromised endpoints are automatically isolated by the firewall, while the endpoint terminates and removes malicious software.
- Saves IT time and money – through automated incident response

Introducing Synchronised Security

With cyber-attacks growing increasingly sophisticated, deploying an array of unintegrated security products can leave you open to advanced attacks. But now you can close the gap by coordinating your defenses. Synchronized security from Sophos is a revolutionary new approach that automates threat discovery, investigation, and response by enabling security technologies to work together. It slashes incident response time and delivers unparalleled protection. Read the paper

A new approach to IT security

With cyber-attacks growing increasingly sophisticated, it's time for a new approach to threat protection. Synchronized security integrates and automates endpoint and network security technologies to deliver unparalleled protection against advanced threats. It's smarter, more coordinated IT security. Download the Synchronized Security Guide to learn more.

Advanced attacks are more coordinated than ever before. Now, with Sophos Security Heartbeat™, your defenses can be too. It shares intelligence in real time between your endpoints and your firewall. To give you unparalleled protection against advanced threats while also slashing your incident response time. Watch the video to see how it works.
