InfoBrief

HP ProLiant servers are the data center gold standard, and continue to solve real-world business challenges.

Today's ProLiant Gen9 portfolio is redefining compute economics by delivering more compute and storage performance using less energy and space to meet the growing demands of your customers' businesses.

HP OneView, our single, software-defined management platform, accelerates IT service delivery through automated configuration and lifecycle management of blade and rack servers and faster virtual machine provisioning.

With software-defined templates and a centralised automation hub, HP OneView Advanced delivers more efficient management and financial savings of daily operations that expedites the delivery of IT services and speeds the transition to Infrastructure-as-a-Service (IaaS) and hybrid cloud.

HP ProLiant Gen9 servers are powered by the latest Intel® Xeon® processor E5-2600/1600 v3 product families. These processors are at the heart of agile, efficient data centers and will meet your compute needs.

HP ProLiant Gen 9 makes some serious claims on performance:

- 3X compute capacity per watt – when compared to a competing Dell Blade M620 for a single threaded application per server.

- Up to 62 percent TCO savings over three (3) years including initial acquisition costs – this is based on 100 DL380 G6 servers consolidated down to 16 DL380 Gen9 enabling 62 percent TCO savings over 3 years including initial acquisition costs. There is also a potential reduction in monthly OPEX expenditure of over 80 percent. Includes software support for vSphere and Windows®. Also includes a 25 percent discount on Hardware. (August 2014.)

- Accelerates IT service delivery—up to 66X faster service delivery with simple automation for a competitive advantage, improving SLA performanc (according to an IDC whitepaper).

- Boosts business performance—Up to 4X read and write workload acceleration with HP SmartCache, which accelerates performance so users can access data faster (Based on HP internal testing. HP SmartCache Performance compared with equivalent controller in a controlled environment in Houston, Texas, May 18, 2014.)

So while HP servers might cost more to purchase, they certainly deliver ROI in the long term.
