My IC mobile for iPhone is an app for users who have an Apple™ iPhone and would like to use it as their preferred or unique business phone.

My IC Mobile for iPhone is deployed through the Apple Store for download, install, and updates.

### Home Layout

The My IC Mobile home screen layout displays four main areas: The user profile settings, the user routing preferences, the application content area and the control tab bar.

### Call History Panel and Visual Voice Mail

The “Call History” panel provides the conversation logs.

In the “Voice mail” panel, the user can perform the following actions:

- Call back the caller
- Delete the message
- Listen to the voice mail
- Add caller to contacts.

### Contact Search

The contact search engine searches contacts from the OmniPCX Office RCE directory or from any external LDAP server thanks to the UDA (Universal Directory Access).

The search engine looks also in the iPhone local directory. The final query result is a mix of local iPhone contacts and remote company directory contacts:

- Call Control
- Call on hold
- Enquiry call
- Call transfer
- Broker call
- Release call.
