

Panasonic phone systems combine the advantages of traditional telecommunications with the convergence of IP technology, offering maximum feature and functional flexibility to handle all of customers' business communication needs, both today and in the future.

The KX-TDA30AL is a hybrid IP-PBX communication solution designed for small business with up to 28 users.

The Panasonic KX-TDA30AL system combines the advantages of traditional telecommunications with the convergence of IP technology, offering maximum feature and functional flexibility to handle all your business communication. The system is a powerful business tool in today's converged networking environment.

This high-performing business communication solution also supports advanced telephone and messaging solutions, efficient and flexible communications, wireless DECT connectivity, IP networking capability and Voice-Over-IP capability.

The KX-TDA30AL can serve as the core of an efficient contact centre for your small business operation providing outstanding customer service. Use the system to automatically distribute incoming calls as desired to a particular extension or group of extensions – such as VIP Call, which provides special handling for key customers and Automated Attendant, which answers calls automatically.

Support for Panasonic Wireless DECT solution allows you to stay connected even while away from your desk, which means increased productivity – and never keep a customer waiting.

With Panasonic KX-TDA Hybrid IP-PBX, you can migrate at your own pace towards VoIP and allow voice and data communication to work within the same network. You can change or add modules without switching off the system. In addition, the system is scalable to match your business growth with handsets and accessories that are common across the system range.
