InfoBrief

OpenScape Voice is the cornerstone application of the OpenScape UC Suite from Unify, formerly Siemens Enterprise Communications. This fully-featured enterprise voice solution supports unified communications and collaboration – mobility, conferencing, presence, one-number service, unified messaging, – and features our industry-leading AudioPresence™ immersive HD technology.

Built with carrier-grade reliability – boasting a redundant active/active server node – OpenScape Voice offers 100% call failover support. And it leads the industry in telephone system scalability, with up to 100,000 users on a node.

Already have a voice system? You can deploy OpenScape Voice as an overlay solution to your existing telephony system to provide centralised SIP session management. This simplifies administration, reduces toll costs, and facilitates migration to software-based IP communications.

Keep it secure with OpenScape Session Border Controller

Want to ensure your communications are secure? OpenScape Session Border Controller secures your IP voice network from intrusion while enabling SIP trunking, branch offices, and remote workers. Once it's deployed, you'll enjoy zero-touch administration, thanks to the Controller's integrated OpenScape Common Management Platform.

Branch out with OpenScape Branch

Bring remote offices together. OpenScape Branch is a scalable (up to 6,000 users), survivable solution for your branch offices. It offers integrated local capabilities such as tones and announcements to reduce bandwidth costs, while the common management platform helps lower your total cost of ownership (TCO).

Reduce with green IT solutions

Smaller carbon footprints, smaller eco-impact. The OpenSpace Voice ecosystem solution contributes to corporate green initiatives. Because it is a centralised data center software application, it dramatically reduces facilities and power requirements by up to 90%. You can further reduce power consumption with OpenStage phones' intelligent standby mode.

And by providing employees with the ability to work remotely and from home, you'll shrink your carbon footprint by cutting commuter miles. What's more, your ability to deliver voice with conferencing and collaboration can help lower travel costs by 20% to 30%.

OpenScape Voice is a world-leading, open, software-based platform, optimised for the data center or public, private, or hybrid cloud deployment

- Carrier-grade reliability with geo-separated redundancy

- Scales to an industry-leading 100,000 users

- **OpenScape Branch** scales to 6,000 users (IPv6 ready)

- **OpenScape Session Border Controller** dramatically reduces the costs of SIP trunking

- Upgradable to full UCC via software and licensing (OpenScape UC Suite)

- Full VMware® software server virtualization support.
