

Unify DECT Handsets

Unify (formerly Siemens Enterprise Communications) offers a range of high-quality DECT (Digitally Enhanced Cordless Technology) phones which allow your staff to move around yet stay in touch, improving contactability and first-call resolution and reducing the need for messages and call-backs.

DECT gives you premises-wide mobility with a coverage area far greater than analogue cordless telephones. A tailored configuration will enable roaming staff to be contactable at all times anywhere on your premises.

Benefits:

Reduce costs: increased connectivity and availability will deliver significant cost savings on calls: roaming staff can answer all calls immediately, eliminating the need to return telephone calls – saving time and money.

Improve Customer Satisfaction: Customers can have their call attended to immediately, without the time taken to locate staff. This provides more efficient response to customer requirements, improving customer satisfaction and retention.

The fully integrated Unify cordless system is a base station system that can be configured to suit the requirements of an organisation of any size and environment.

Each base station can cover a distance of approximately 50m internally and up to 300m externally.

All menu-driven features available on desk handsets can be accessed in the same manner on the cordless handsets.

The Unify digital cordless system provides for cordless handsets to be registered at multiple sites.
